

PET recycling works. Let's do more, America!

PET (polyethylene terephthalate) is the #1 most recycled of all plastics—ideal for food and beverage containers, carpeting, clothing and more. And America has stepped up, recycling a whopping 1.7 billion pounds in 2020. That's great for our environment. But demand for recycled PET among product manufacturers is increasing too. So let's join together to recycle more, and recycle right!

The answer rests right on our shelves and our shoulders.

These infinitely recyclable PET containers are in our homes, ready to meet demand. The decision to recycle is in your hands. Make it part of your day. And look for PET packaging when you shop. It's strong, lightweight, shatterproof and safe.

- Water bottles
- Juice containers
- Soda bottles
- Salad dressings
- Cooking oils
- Pharmaceuticals
- Peanut butter
- Shampoos
- Conditioners
- Liquid hand soap
- Mouthwash

Did you know?

If each person in a typical elementary school recycled just one PET bottle per day, that would be about 473 bottles. That equates to 24 pounds of PET per day and 8,632 pounds per year—nearly the weight of a 40-foot cargo container!

How to recycle right.

Instead of mixing PET in with household trash that goes to landfills, take a moment to separate and recycle it. PET bottles and packaging are accepted by nearly every recycling program nationwide. Join the PET movement to empower a greener, lower-carbon planet.
